Professional Summary

- Portfolio: <https://kaili.dev>
- Backend engineer with 6+ years of Java experience and a background in financial, payment, and distributed systems; able to design and deliver reliable backend services.
- Full-stack experience with Node.js, NestJS, React, Next.js, Python, and PostgreSQL; capable of delivering features from requirements analysis through development, testing, deployment, and production support.
- Nearly one year of hands-on experience with AI-assisted software development, including requirements clarification, codebase analysis, task decomposition, implementation, testing, debugging, and code review.
- Designed and used verification-oriented AI coding workflows: provide business and codebase context, turn ambiguous requirements into testable tasks, and use independent review and quality checks to validate AI-assisted changes.
- Experience working remotely with international colleagues and participating in English-language daily stand-ups and technical discussions.
- Strong understanding of software design, modular architecture, API design, data consistency, access control, and maintainable backend systems.

Skills

- Languages: Java, TypeScript / JavaScript, Python
- Backend: Spring Boot, Spring Cloud, Node.js, NestJS, FastAPI, REST APIs, modular monoliths, microservices
- Frontend: React, Next.js, TanStack Query, Tailwind CSS
- Databases & Storage: MySQL, PostgreSQL, Redis
- Messaging & Integration: Kafka, RabbitMQ, MQTT, Webhooks, third-party API integrations
- Engineering: API design, authentication and authorization, RBAC, tenant isolation, automated testing, CI/CD, debugging, performance optimization, secure coding
- AI-assisted development: requirements clarification, codebase analysis, task decomposition, AI-assisted implementation, testing, code review, and quality-gate workflows

Project List

Agricultural Industry Platform

Backend

2020.01-2024.01

A multi-application platform spanning e-commerce, payment processing, lending, and grain trading & warehousing.

Stack

Java / Spring Boot / Dubbo / RabbitMQ / MyBatis-Plus / MySQL / Redis

Trading domain

- Owned core modules including orders, marketing campaigns, and merchants, supporting ordering across multiple roles and entry points.

- Integrated online payment, credit sales, prepayment, and bank-loan scenarios into the order and settlement workflows.

Payments & supply-chain finance

- Integrated multiple payment and lending channels, including UnionPay direct payment, prepayment, credit sales, and bank-loan products.
- Connected credit checks, loan disbursement, payment callbacks, order-state transitions, and prepayment-account postings.

Grain trading & warehousing

- Worked on purchase and sales contracts, weighbridge weighing, quality inspection, inbound and outbound approval, inventory, and stocktaking.

Investor Service System

FullStack

2024.04-2026.07

Developed and maintained a fund-management system for State Street.

- Incrementally refactored existing backend modules with NestJS.
- Rebuilt the legacy JavaFX desktop client in React.
- Built an internal RAG system to help the business team resolve client questions more efficiently.
- Worked across requirements analysis, backend development, frontend development, testing, deployment, and production support.
- Collaborated remotely with international colleagues and participated in English-language daily stand-ups.

Employment History

Stratup Company

Full Stack Engineer (Part-time, Remote)

2026.08-Now

Early-stage mental-health appointment platform | Confidential startup

- Core full-stack developer in a three-person engineering team, working across frontend, backend, technical design, third-party integrations, deployment, and production operations.
- Built scheduling, availability, conflict detection, payments, notifications, documents, messaging, and administration features.
- Developed a full-stack monorepo with Next.js, TypeScript, FastAPI, Python, and PostgreSQL.
- Implemented JWT, RBAC, resource-ownership checks, and tenant-context propagation across multiple user roles.
- Integrated payment, refund, SMS, electronic-signature, video-conferencing, and Webhook services.
- Improved AI-generated backend code through issue investigation, refactoring, testing, and maintainability improvements; participated in weekly releases and production support.

Anhui Wangxin Hengtian Software Co., Ltd

Full stack

2024.04-2026.07

Developed and maintained a fund-management system for State Street.

- Incrementally refactored existing backend modules with NestJS.
- Rebuilt the legacy JavaFX desktop client in React.
- Built an internal RAG system to help the business team resolve client questions more efficiently.

Hefei Yicun Information Technology Co., Ltd.

Back end

2020.01-2024.01

- Built and maintained an agricultural industry platform spanning e-commerce, payments/finance, and grain trading & warehousing (ERP).
- Integrated smart weighing devices over MQTT, connecting device data to business records to support warehouse automation.
